

FitBuddy AI

8. Project Demonstration

Final presentation and evidence checklist.

Demonstration Objective

Demonstrate the complete FitBuddy AI workflow from user input to AI-generated workout and nutrition output.

Demo Sequence

- 1. Introduce the problem FitBuddy AI addresses.
- 2. Show the project architecture.
- 3. Open the application.
- 4. Enter sample user information.
- 5. Generate the plan.
- 6. Explain how FastAPI handles the request.
- 7. Explain how the Gemini integration generates the content.
- 8. Show the Jinja2 result page.
- 9. Show validation/error handling.
- 10. Show the organized GitHub repository.

Evidence Files

- demo_screenshots/ — selected screenshots of the working application.
- demo_video.mp4 — optional short screen recording.
- architecture.png — system/data-flow diagram.
- test_report.pdf — final test evidence, if maintained separately.

Presentation Points

- Problem and objective.
- Key features.
- Technology stack.
- Architecture and data flow.
- AI integration.
- Testing and error handling.
- Limitations.
- Future enhancements.

Final Submission Checklist

- All eight phase folders exist.
- Actual source code is included in the appropriate implementation area.
- README.md is present at repository root.
- requirements.txt is present.

- .env and secrets are excluded.
- Documentation and screenshots are included.
- The repository can be understood without the original video.
